REVISION DATES and STANDARD NO.'s REVIEW

	NAME	DATE
STRUCTURES STANDARDS		

PROJECT NO. 0000 YV YYV T0592 01 C		1D OF 34	
RECORD DRAWING DATA	FEDERAL ID NO. YYV-0(225)T	REC. DWG. DATE	OF

1. SPILL PREVENTION, CONTROL, AND COUNTERMEASURES – CWA SECTION 311

If total above-ground storage capacity, including mobile re-fuelers stationed on-site, is greater than 1,320 gallons of oil (oils, greases, fuel, asphalt, and asphalt derivatives), where a spill has the potential to reach Waters of the US, the Contractor shall prepare a SPCC plan per contract specifications in Section 104.16 (C) of the Standard Specifications.

2. SURFACE WATER POLLUTION PREVENTION – CWA SECTION 402

☑ No CWA Section 402 Construction General Permit (CGP) Action Required; See Std. Spec. 104.09 and 104.10 for General Requirements

3. WORK IN WATERS OF THE UNITED STATES – CWA SECTION 404/401

☑ No Permit Required; Refer to Section 104.16 (D) of the Standard Specifications for General Requirements

4. BIOLOGY PROGRAM – ESA SECTION 7; MBTA, ARIZONA REVISED STATUTES TITLE 17

BIO-1: Environmental Awareness, Monitoring and Avoidance ☑ N/A

BIO-2: Migratory Bird Treaty Act (MBTA) ☐ N/A

The contractor shall avoid nests with relocation directions.

BIO-2A: General Seasonal Restrictions for MBTA, refer to seasonal dates in EPIC and general requirements in 104.16(E) of the Standard Specifications.

If construction occurs during the migratory bird breeding season: March 1 to August 31 refer to Section 104.16 BIO-2 of the specifications for direction.

BIO-2D: MBTA – Active Cliff Swallow Nests ☑ N/A

BIO-3: Burrowing Owls ☑ N/A

BIO-4: Bats ☑ N/A

BIO-5: Sonoran Desert Tortoise ☒ No ☐ Yes

5. VEGETATION PROTECTION PROGRAM – CWA SECTION 402, EO 13122

General (applies to all projects); The contractor shall comply with the requirements specified in Section 104.16 (F) of the Special Provisions and Section 104.16 (B) of the Standard Specifications.

☑ No Vegetation Protection Program Action Required; See Std. Spec. 107.11 for General Requirements

6. CULTURAL RESOURCES PROGRAM

☑ No Cultural Resources Program Action Required; See Std. Spec. 107.05 and 107.06 for General Requirements

7. HAZARDOUS MATERIALS PROGRAM

General (applies to all projects); See Std. Spec. 107.07 for General Requirements.

☐ No Hazardous Materials Program Action Required

Is Asbestos present? ☑ No ☐ Yes

Is a NESHAP notice required? ☐ No ☒ Yes

If yes, coordination with the ADOT Hazardous Materials Specialist is required and the NESHAP notification shall be submitted at least ten (10) business days prior to initiation of construction activities to: Arizona Department of Environmental Quality Air Quality Division

Is Lead-based paint present? ☑ No ☐ Yes

8. NOISE PROGRAM

☑ No Noise Program Specific Project Action Required; See Std. Spec. 104.08 for General Requirements

9. AIR QUALITY PROGRAM

☑ No Air Quality Program Action Required; See Std. Spec. 104.08 for General Requirements

10. OTHER ENVIRONMENTAL ISSUES

Project Specific Environmental Commitments: ☐ N/A

- The contractor shall complete a National Standards for Hazardous Air Pollutants (NESHAP) notification for the work associated with partial removal of the bridge wing walls and backwall and submit to the Engineer, who shall submit it to the Arizona Department of Transportation environmental planning hazardous material coordinator (602.920.3702 or 602.712.7767) for a five (5) working day review and approval. Upon approval, the contractor shall file the notification with Arizona Department of Environmental Quality (ADEQ) at least ten (10) working days prior to the commencement of work.

MIDPOINT OF PROJECT

Central Zone
State Plane Coordinates

X=456623.00
Y=1562558.08

LENGTH OF PROJECT

Sta 825+26.25 to Sta 828+98.41 = 372.2'
Gross & Net Length = 372.2'-0.07 Miles
Mile Post 149.10 to 149.03

INDEX OF SHEETS

GENERAL NOTES

The roadway plans have been designed utilizing the Construction Standard Drawings (C-Series) and current revisions. Refer to the 1A sheet for a listing of current revision dates.

The project roadway shall be striped by the contractor in accordance with the current edition of the Signing and Marking Standard Drawings (M&S-Series) and the pavement marking plans.

Pavement lift thickness is nominal.

Where only the horizontal location of an existing utility is shown, the location is approximate. Where both the horizontal and vertical location of an existing utility is shown, the location has been verified by field survey methods. The contractor shall comply with all current Blue Stake laws and Section 107.15 of the Specifications.

Delineators, object markers and mile post markers shall be removed and reset as required at no additional cost to the Department.

New Right of Way and easements are not required.

The average project elevation is 5680'.

Changes in location or length of spillway or downdrain installation may be made by the Engineer to improve drainage conditions.

NOTES

1. *Construction staging must be limited to the designated potential staging areas shown on the plans. Use of the abandoned bridge and access along the abandoned Historic US Route 66 for construction activities is prohibited. No construction equipment, materials, or vehicles are allowed on the abandoned bridge at any time. These restrictions apply to all cultural avoidance areas. All work, including ground disturbance and staging of vehicles or equipment, must remain within the existing roadway prism.*
2. *All work shall be conducted in BNSF right-of-way and must comply with the Special Provisions and the Contractor's C-1 Agreement with BNSF.*
3. *Contractor is responsible in maintaining proper clearances from overhead lines at all times.*

GENERAL NOTES

The following parameters were used for the basis of this survey:

System: United States State Plane, Arizona Central Zone
Horizontal Datum: NAD 83
Vertical Datum: NAVD 88
Units: International Feet (1 Foot = 0.3048 Meters Exactly)

Basis of Bearings:
TRACE Consulting, LLC furnished the coordinates for this project. All coordinates listed are 1983 (2011 Epoch) State Plane ground coordinates Arizona Central Zone. Standard Transverse Mercator projection, with a scale of origin of X=0.0000 and Y=0.0000. using a grid adjustment factor of 1.0003 as provided by ADOT. These coordinates can be utilized as ground datum. To convert back to grid coordinates divide each coordinate value by 1.0003.

Basis of Elevations:
An elevation of 5679.38 was held on Point #101 established through NGS OPUS solution on July 25, 2023.

All bearings are grid bearings. Distances are ground distances and coordinates are ground coordinates.

The field portion of this survey was performed during July 2023 and February 2024.

The bases of coordinates and elevations for this project were derived from National Geodetic Survey (NGS) OPUS Solutions,performed on July 25, 2023.

TRAFFIC CONTROL NOTES

1. *The traffic control plans represent a suggested method for traffic control during construction. The contractor may prepare and submit alternate traffic control plans, for each work activity in this project, to the Engineer for review and approval two weeks prior to the start of any construction activities (or at the Preconstruction Conference). The traffic control plans shall be in accordance with the requirements of Section 701 "Maintenance and Protection of Traffic" of the ADOT Standard Specifications for Road and Bridge Construction 2021, the requirements of Part 6 of the Manual on Uniform Traffic Control Devices (MUTCD) 2009, ADOT Temporary Traffic Control Design Guidelines (TCDG) 2019, the Arizona Supplement to the MUTCD 2009, and the Special Provisions Section 104.04. No measurement or direct payment will be made for developing the traffic control plans, the cost will be considered as included in the price of the contract bid items.*

2. *Adjustments to the details of these traffic control plans and requirements may be necessary due to construction activities, as directed and approved by the Engineer.*

3. *All existing signs in conflict with the construction signs shall be covered in place as directed by the Engineer. The cost shall be included in the price of contract items. Any sign damaged during the course of construction shall be replaced at no additional cost to the department.*

4. *The retroreflective sheeting on all construction and caution signs shall meet criteria established in Section 1007 of ADOT Standard Specifications and in Section 380 of the ADOT Traffic Engineering Policies, Guidelines and Procedures.*

5. *All advance warning signs are to remain for the duration of the project. All signs shown on the plans shall be mounted on portable sign stands or barricades per plans. All signs may be installed at the height recommended by the sign stand or barricade manufacturer.*

6. *Flags shall be mounted on top of all construction and caution signs on portable sign stands and on top of all barricades type II and III.*

7. *Type A flashing warning lights shall be required on all night-time construction and caution signs mounted on sign stands.*

8. *Type A warning lights shall be mounted on all type II barricades.*

9. *A Type A warning light and an orange flag shall be mounted on each end of each type III barricade.*

10. *Type C steady-burning yellow lights shall be mounted on every vertical panel.*

11. *Channelizing devices shall be placed 40 feet on center in tapers and 80 feet on center in tangents, except as otherwise noted on plans.*

12. *Construction signs shall not be displayed to traffic more than 24 hours prior to the actual start of construction. These signs may be installed sooner but they must be covered or turned away from traffic. The cost for covering or turning them shall be considered part of the sign installation cost. No further compensation will be made. These signs shall be removed within 24 hours after the completion of construction activities.*

13. *All construction signs shall have black letters on an orange background, except as otherwise noted.*

14. *All caution signs shall have black upper panels with yellow "CAUTION" header lettering and yellow lower panels with black letters, except as otherwise noted. Caution signs shall be in accordance with the requirements of OSHA Accident Prevention Signs and Tags Standard (OSHA 1926.200) and OSHA Power Line Safety (Up to 350kV)-- Equipment Operations Standard (OSHA 1926.1408).*

15. *Type I and Type II barricades shall be used for channelizing devices, unless directed by the Engineer to use vertical panels. The contractor may substitute Type I barricades for Type II barricades as long as the reflective area on the top panel of each Type I barricades is equivalent or greater than the reflective area of a Type II barricade.*

16. *When traffic control devices are not in use, they shall be moved at least 30 feet from the roadway.*

17. *An adequate number of Type III barricades shall be placed across each roadway to be closed. A 48 x 30 inch “BRIDGE CLOSED” sign shall be attached to one of the Type III barricades closing the roadway.*

18. *The contractor shall abide by the traffic control requirements contained in subsection 104.04 "Maintenance of Traffic" of the Special Provisions.*

19. *The contractor shall place the changeable message boards two weeks prior to the start of construction to alert traffic of the upcoming road restrictions. The contractor shall position changeable message boards as directed by the Engineer. Cycle time and duration of the messages shall be such that the entire message can be read twice at operating speed from no further than 650 feet. The contractor shall locate the changeable message boards just off the paved roadway in compliance with the clear zone requirements or as directed by the Engineer. The Engineer will determine the messages on the changeable message boards to coincide with construction activities.*

20. *The contractor shall maintain traffic on paved surfaces at all times.*

21. *The contractor shall preserve all roadway signs, sign supports, object markers and milepost markers. The contractor shall replace any signs, sign supports, and markers damaged as a result of the construction at no additional cost to the department.*

22. *Embedded sign post locations shall be field-adjusted based on AZ811 utility markings and as approved by the engineer to avoid conflict with existing underground utilities.*

MAINTENANCE OF TRAFFIC				
Activity No.	*Construction Activity*	*Duration (Calendar Days)*	*Traffic Control*	*Comments*
1	*Place all advance warning signs prior to the start of any work.* *Maintain full road closure on Crookton Road for the entire duration of the construction activities.*	*141*	*Provide advance warning signs per details on sheets T-1.04 through T-1.07.*	*Provide Changeable Message Board (CMB), support trailer and ten Type II barricades surrounding each CMB per Figure SA-15 of the ADOT TCDG. CMBs shall be placed 14 days prior to the road closure as directed by the Engineer.* *Lights shall be provided on each barricade as described in the Traffic Control Notes.* *Advanced warning signs and caution signs shall remain for the duration of the work.*
2	*Deck Replacement:* *A. Install Protection System for BNSF Tracks.* *B. Remove existing railing, guardrail, curb and dados.* *C. Remove existing concrete deck.* *D. Remove portions of the existing backwall and wingwalls and reconstruct as shown on structural plans.* *E. Perform modifications on existing steel girders and install new shear studs.* *F. Construct new deck and install deck drains and deck joints.* *H. Construct new approach slabs.* *I. Construct bridge barrier and install chain link fence to top of barrier.* *J. Remove Protection System for BNSF Tracks.* *K. Slurry backfill at front face of the abutments.*	*109*	*Install erosion control, construct deck replacement, and construct bridge approach roadways under full road closure per details on sheet T-1.07.*	
3	*Bridge Approach Roadway:* *A. Remove and install new pavement at the bridge approach roadway as shown on roadway sheets.* *B. Remove and construct new roadway guardrail and thrie beam transitions.*	*66*		
4	*Install new pavement markings.* *Remove all advance warning signs once all work is completed.*	*5*	*Perform pavement and marking activities under full road closure per details on sheet T-1.07*	

NOTES

1. *The order of activities above does not constitute a sequence of construction. The contractor shall perform the work in the most expeditious manner consistent with the project plans, ADOT project Special Provisions and approval of the Engineer.*

PAVEMENT MARKING NOTES:

1. *All markings shall be in compliance with the latest editions of the ADOT Standard Specifications, ADOT Signing and Marking Standard Drawings, the Manual on Uniform Traffic Control Devices (MUTCD) 2009 Edition, and the Arizona Supplement to the MUTCD, unless noted in the Special Provisions or these plans.*

2. *The dimensions shown to pavement stripes are to the center of the stripe.*

3. *Final striping shall be a two-part epoxy pavement marking material placed at a minimum of 30 days after the initial striping. The two-part material shall conform to the requirements of the Special Provisions.*

4. *All reflective raised pavement markers shall have an abrasion-resistant coating on the face of the prismatic reflectors and shall conform to details M-19 of the ADOT Standard Drawings. They shall be installed with a bituminous adhesive which is on the ADOT Approved Products List.*

5. *The Contractor shall clean the roadway surface to the satisfaction of the Engineer, by sweeping and air-jet blowing, immediately prior to the placement of all epoxy pavement markings. The roadway surface shall be dry. The pavement temperature shall not be less than 40 degree F and the air temperature wind chill factor shall not be less that 35 degree F for the placement of epoxy pavement markings.*

6. *It is the contractor's responsibility to ensure that the final surface course is placed so that the striping is offset one foot clear of any construction joint, unless otherwise directed by the Engineer.*

7. *The contractor shall be responsible for the layout and installation of permanent pavement markings on the final surface course following control points that have been set no more than 50 feet apart along the lines to be striped.*

8. *When stripe obliteration is necessary, it shall be accomplished by an approved method. Painting over striping, and overlaying pavement do not constitute stripe obliteration.*

9. *The pavement marking drawings are schematic only and not to scale. The contractor shall follow all dimensions and details when installing pavement markings.*

10. *The Engineer may modify pavement marking plans.*

11. *The contractor shall remove the curing compound before installing pavement markings on the new Crookton Rd over BNSF Railroad bridge deck.*

NOTES:

1. The existing bridge was constructed by the Arizona Highway Department under Project No. NON FA 80-B-1955 in 1956.
2. The original bearings were replaced in 2000 as shown in the as-built drawings (Cannon & Associates).
3. See S-1.04 and S-1.05 for deck removal limits.
4. Stations and Elevations are given along the Construction Centerline.
5. All Stations, Elevations, and Dimensions shown on this sheet are for the proposed bridge deck.
6. Repair slope erosion at front face of each abutment using slurry backfill. See Bid Item No. 9240142 - Miscellaneous Work (Slurry Backfill) and Special Provisions.

1 **NEW TYPICAL SECTION**

Scale: ¼" = 1'-0"

GENERAL NOTES:

Construction Specification - ADOT Standard Specifications for Road and Bridge Construction, 2021 and Special Provisions.

Design Specifications - AASHTO LRFD Bridge Design Specifications, 9th Edition, 2020.

Dead Load - Dead load includes an allowance for 25 psf for future wearing surface (FWS) and 15psf for metal stay-in-place deck forms.

Live Load - Loading Class HL-93 (Deck design only).
Loading Class HS20-44 (Girder Rating only).

Inventory and operating Ratings are in accordance with the AASHTO Manual for Bridge Evaluation, 3rd Edition with Interim Revisions through 2020, in accordance with the Load and Resistance Factor Rating Method.
Inventory Load Rating - 1.04
Operating Load Rating - 1.46

All concrete shall be Class 'S' unless noted otherwise.

Reinforcing steel shall conform to ASTM Specification A615. All reinforcing shall be furnished as Grade 60 Epoxy Coated.

All bends and hooks shall meet the requirements of AASHTO Article 5.10.2. All bend dimensions for reinforcing steel shall be out-to-out of bars. All placement dimensions for reinforcing steel shall be to center of bars unless noted otherwise.

All reinforcing steel shall have 2 inch clear cover unless noted otherwise.

Material Strengths:

Deck	f'c =	4.5	ksi
Approach Slabs	f'c =	4.0	ksi
38" Single Slope Bridge Concrete Barrier	f'c =	4.0	ksi
All Other Class 'S' Concrete	f'c =	3.5	ksi
Grade 60 Transverse Deck Reinforcement	fs =	24.0	ksi
All Other Grade 60	fy =	60.0	ksi
Structural Steel Shear Studs (ASTM A108)	fy =	50.0	ksi
Miscellaneous Structural Steel	fy =	36.0	ksi

All welding shall conform to the requirements of the American Welding Society. ANSI/AASHTO/AWS D1.5 Bridge Welding Code, latest edition.

Lead is likely present in the paint on the girders and on the bearings. Removal of lead based paint material, if required, shall be in accordance with the Specifications.

Barriers shall be constructed after spans have taken dead load deflection. Barriers shall not be slip formed.

Chamfer all exposed corners ¾" unless noted otherwise.

Dimensions shall not be scaled from drawings.

Construction joints not shown on plans shall require the approval of the Engineer prior to construction.

Approximate Quantities (For Information Only)			
Description	Units	Total	As-Built
Remove (Bridge Railing)	LF	285	
Removal of Structural Concrete	CY	170	
Remove (Guard Rail on Crookton Bridge)	LF	320	
Structural Excavation	CY	30	
Structure Backfill	CY	30	
Structural Concrete (Class S) (f'c = 3,500)	CY	12	
Structural Concrete (Class S) (f'c = 4,500)	CY	134	
Bridge Deck Drain Assembly	LS	1	
Single Slope Bridge Concrete Barrier and Transition (38")	LF	345	
Deck Joint Assembly (3x3 Compression Seal)	LF	65	
Approach Slab (SD 2.01)	SF	1,050	
Reinforcing Steel (Epoxy Coated)	LB	46,655	
Chain Link Fence (Crookton Bridge)	LF	275	
Force Account Work (Steel Girder Modifications)	LS	1	
Miscellaneous Work (Shear Studs)	LS	1	
Miscellaneous Work (Slurry Backfill)	CY	8	

In addition to the requirements of section 202-3.05 of the standard specifications, at least ten working days before beginning any bridge removal operations either wholly or in part, the contractor shall submit to the Engineer for review and approval, details of the proposed removal operations showing the methods and sequence of removal and equipment to be used.

All dimensions are based on the record drawings and shall be verified prior to the fabrication of any materials.

The contractor shall measure the existing top of deck along the inside face of curb and at the centerline of the bridge at the tenth points prior to the start of construction. The elevation, northing, and easting shall be provided to the Engineer for review.

Design and construction of deck falsework systems by the contractor shall ensure that bridge girders are braced and tied to resist any forces that would cause rotation or torsion in the girders caused by the placing of the deck concrete or shall verify the bridge girders are adequate for those effects.

All construction joints shall be intentionally roughened to an amplitude of 1/4" unless noted otherwise.

Work associated with the Railroad Protection System is included under the item "Removal of Structural Concrete," in accordance with the Special Provisions.

3 PARTIAL BACKWALL REMOVAL

Scale: 1/2" = 1'-0"

LEGEND:

Hatched area indicates concrete removal of existing deck, curbs, railings, guardrails, wingwalls, backwalls, and dados.

Removal of Existing Pavement Full Depth

GENERAL REMOVAL NOTES

1. Concrete, railings, and guardrails shall be removed to the limits shown in accordance with Section 202 of the ADOT Standard Specifications.
2. All removal shall comply with BNSF Demolition Guidelines and BNSF Grade Separation Guidelines.

DECK REMOVAL NOTES

1. Damage to the existing girders, as a result of the Contractor's removal operations, shall be repaired to the satisfaction of the Engineer.
2. The size, type, and spacing of the existing shear connectors on the top flange of the girders are unknown. All existing shear connectors that are in conflict with the new shear studs shall be removed and disposed of. Existing shear connectors that are not in conflict with the new shear studs may remain in place.
3. New shear studs shall be installed per detail on Dwg S-1.09.
4. A Removal Plan shall be submitted to the Engineer and BNSF for approval prior to starting any removal operations over the BNSF railroad tracks. See BNSF Track Protection Details.

DADO AND WINGWALL REMOVAL NOTES

1. The Contractor shall exercise due care in removal of the existing concrete to prevent damage to the remaining concrete.
2. Existing reinforcement shall be cut flush with the removal limit and sealed with epoxy.

BACKWALL REMOVAL NOTES

1. Existing vertical reinforcement shall be protected during removal of the concrete. Reinforcement shall be cleaned and straightened for incorporation into the new concrete.

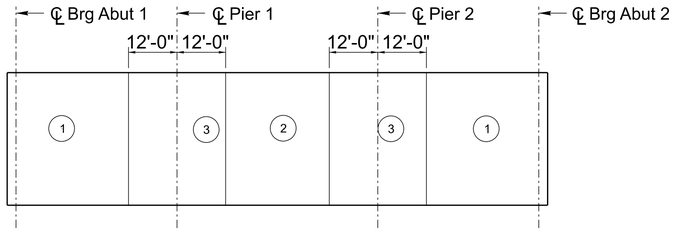
POUR NOTES:

1. Numbers (1), (2) & (3) indicate placing sequence of deck concrete. Pour (2) sections a minimum of 48 hours after (1) sections have been poured. Pour (3) sections a minimum of 12 hours after adjacent (1) & (2) sections have been poured.
2. As an alternate, (1) and (2) sections may be poured consecutively in sequence in one direction only. The rate of pour shall be such that each new section shall be poured before the previously poured adjacent section has set.
3. Sections (2) and (3) may be poured consecutively but only if the concrete remains plastic during the entire pour and a minimum of 48 hours after the adjacent (1) section has been poured.
4. The contractor shall submit a Deck Pour Schedule to the Engineerfor approval prior to placing concrete.



DECK POUR SCHEDULE (1)

NOTE:

See SD 1.10 for additional information.

SUPERSTRUCTURE NOTES:

All continuous horizontal reinforcing steel in the Deck Slab, and Barriers may be spliced if approved by the Engineer with minimum lap lengths specified in Note 1 and subject to the following limitations in Notes 2 thru 6, unless otherwise noted.

1. Minimum lap length of bar splices shall be: #5 bars..... 2'-4"
   #6 bars..... 2'-9"
2. Bars shall not be spliced within the required lap length of the adjacent bars.
3. Top transverse reinforcing in the deck slab may only be spliced at CL of slab span (halfway between girders). Adjacent bars shall not be spliced at the same location.
4. Bottom transverse reinforcing in the deck slab may only be spliced at CL of girders. Adjacent bars shall not be spliced at the same location.
5. Additional #5 top longitudinal reinforcing in the deck slab shall not be spliced.
6. No splice shall be allowed for longitudinal deck reinforcing within 15'-0 either side of pier CL.

SHEAR STUD NOTES:

1. Shear stud spacing may be adjusted as needed to avoid existing splice plates.
2. The size, type, and spacing of the existing shear connectors on the top flange of the girders are unknown. All existing shear connectors that are in conflict with the new shear studs shall be removed and disposed of. Existing shear connectors that are not in conflict with the new shear studs may remain in place.
3. The approximate number of new shear studs is 1,500.

SCREED ELEVATION NOTES:

The Contractor shall provide the Engineer the following for calculation of girder screed elevations prior to setting deck formwork

1. Top of girder elevations at tenth points along the girder spans.
2. Deck pour plan

The cost of surveying the top of the existing steel girders after the existing deck is removed shall be included in the Construction Surveying and Layout pay item.

The Screed Elevations shall be used in setting screeds regardless of the measured top of erected girder elevations (DO NOT USE FINISH GRADE ELEVATIONS FOR SETTING SCREEDS).

The Build Up shall be calculated based on the measured Top of Existing Girder Elevation. The Build Up equals the (Screed Elevation) minus (Measured Erected Girder Elevation) minus (Slab Thickness of 8½ inches).

BRIDGE ELEVATIONS
STANDARD LIMITS OF PROTECTION FOR FRAME PROTECTION

BRIDGE ELEVATION
MINIMUM LIMITS OF PROTECTION FOR FRAME PROTECTION
(SPECIAL PERMISSION REQUIRED, SEE NOTE 1)

1. THE STANDARD LIMITS OF PROTECTION NOTED ARE THE MIN. CLEARANCES ALLOWED WITHOUT SPECIAL PERMISSION FROM THE RAILROAD. THE REDUCED CLEARANCES NOTED MAY BE ALLOWED BY THE RAILROAD. SPECIAL PERMISSION FOR THE REDUCED CLEARANCES IS REQUIRED FROM THE RAILROAD AND PUBLIC AGENCY.
2. THE PROTECTION FRAME SHALL AS A MINIMUM MATCH THE DEMOLITION LIMITS SHOWN AND EXTEND PAST THE BRIDGE WIDTH AS SHOWN ON THE ATTACHED DEMOLITION PLAN SHEET.
3. FOR ADDITIONAL CLEARANCE AND PROTECTION INFORMATION REFER TO CONTRACT EXHIBITS.
4. THE PROTECTION FRAME SHALL PREVENT DEMOLITION DEBRIS, DUST AND FINE MATERIAL FROM FALLING INTO THE RAILROAD TRACKS, ACCESS ROAD OR TRAINS. THE FRAME SHALL BE DESIGNED BY THE CONTRACTOR TO SUPPORT THE ANTICIPATED DEMOLITION LOADS, AND IN ACCORDANCE WITH CALTRANS FALSEWORK MANUAL FOR STRUCTURES OVER THE RAILROAD.
5. DEBRIS PROTECTION IS REQUIRED NEAR THE BASE OF THE SIDE SLOPES AND ADJACENT TO ROADS USED BY DEMOLITION EQUIPMENT TO PREVENT DEBRIS FROM ROLLING ONTO TRACK, ACCESS ROAD OR DITCH. USE TIMBERS AS REQUIRED TO STOP LARGE PIECES OF ROLLING DEBRIS.
6. ANY ACTIVITY WITHIN 25 FEET OF THE NEAREST RAIL OF A TRACK REQUIRES A FLAGMAN.

* IF NO ACCESS ROAD USE MIN. DIMENSION FROM OTHER SIDE OF DETAIL

Shoring must be designed for Railroad live load surcharge in addition to OSHA Standard loads for excavation in Zone A.
APPLICABLE RAILROAD LIVE LOAD: COOPER E80

GENERAL NOTES:

All dimensions are measured perpendicular to ℄ of track.

Prior to commencing any work, the contractor shall submit for approval by the Railroad detailed plans indicating the nature and extent of the track protection shoring proposed. The contractor shall install the temporary shoring system per the approved plans. Design of the temporary shoring system to comply with **GUIDELINES FOR TEMPORARY SHORING.**

For excavations which encroach into zone A or B, shoring plans shall be accompanied by design calculations. Plans and calculations must be signed and stamped by a Professional Engineer registered in the state where the work will be performed.

CONSTRUCTION NOTES:

1. Any shoring system that impacts the Railroad's operation and/or supports the Railroad's embankment shall be designed and constructed per Railroad Guidelines for Temporary Shoring.
2. All demolition within the Railroad's right-of-way and/or demolition that may impact the Railroad's tracks or operations shall comply with the Railroad's Demolition requirements.
3. Erection over the Railroad's track shall be planned such that it enables the track(s) to remain open to traffic per Railroad requirements.
4. The elevation of the existing top-of-rail profile shall be verified before beginning construction. All discrepancies shall be brought to the attention of the Railroad prior to construction.
5. The proposed grade separation project shall not change the quantity and/or characteristics of the flow in the Railroad ditches and/or drainage structures.
6. The contractor must submit a proposed method of erosion and sediment control and have the method approved by the Railroad prior to beginning any grading on the project site.
7. For Railroad coordination please refer to the Railroad's Coordination Requirements as part of the Specifications or Special Provisions of the project.
8. Temporary Construction Clearances, including falsework clearances, shall comply with Figure 1.
9. All permanent clearances shall be verified before project closeout.

PART 1 - To be completed by the Landscape Architect or Design Engineer

I. PROJECT DESCRIPTION

A. Owner Name and Address:

Arizona Department of Transportation
205 South 17th Avenue
Phoenix, Arizona 85007-3213

B. Project TRACS Number: T0592 01 C

C. Project Location: Crookton Road

City: Seligman County: Yavapai

Beginning Latitude (NAD 83): 35° 17' 25.04" N

Beginning Longitude (NAD 83): 112° 43' 56.50" W

Ending Latitude (NAD 83): 35° 17' 27.97" N

Ending Longitude (NAD 83): 112° 43' 59.19" W

To obtain the project latitude/longitude data, refer to the Flash Earth web link below (Bing Maps with labels): *http://www.flashearth.com/*

D. Project Description: Bridge Rehabiliation

II. HYDROLOGIC INFORMATION

A. Project Size:
Length (Mi.) 0.07
Area (Ac.) 0.28

B. Area to be Graded (Ac.) *: 0.00

* Blading of the shoulder build-up area is considered as grading and ground disturbance and should be covered by stormwater and/or other environmental regulations.

C. Percentage of the site that is impervious before and after construction:
Percentage before Construction: 100%
Percentage after Construction: 100%

D. Receiving Water(s), refer to the Arizona Department of Water Resources Web Link below (USGS Topo) :
https://gisweb.azwater.gov/WellRegistry/Default.aspx

III. PRESERVATION OF EXISTING VEGETATION

A. In accordance with the specifications, existing vegetation will be preserved. Clearing limits shall be confined to areas that require grading. Existing vegetation outside the boundaries of the cleared area shall be protected from damage by construction activities. Existing trees within the area to be cleared shall be preserved and protected, wherever possible.

IV. SOIL STABILIZATION MEASURES

A. All disturbed soil, which will not be paved, riprapped or otherwise covered to prevent erosion, will be revegetated and/or landscaped in accordance with the project plans and specifications.

B. Scheduling of the revegetation effort can be found on PART 2 of this sheet under SCHEDULE OF MAJOR ACTIVITIES.

V. MEASURES TO CONTROL EROSION AND SEDIMENT

A. Temporary Erosion and Sediment Controls: (Refer to the Following SWPPP Site Plan and Specifications)

- ___ Erosion Control Mattings
- ___ Temporary Diversion Dikes
- ___ Check Dams
- ___ Rock Inlet/Outlet Protection
- ___ Sediment Control Berms
- ___ Silt Fences
- X Wattles (Excelsior/Straw)
- ___ Excelsior Logs / Sediment Logs
- ___ Seeding (Class II with mulch)
- ___ Others Describe: ___

B. Permanent Erosion and Sediment Controls and Post-construction Storm Water Management Measures: (Refer to SWPPP Site Plan and Specifications)

- ___ Crown Ditch/Dike
- ___ Rock Protection
- ___ Rock Riprap Channel Lining
- ___ Sediment Basin
- ___ Embankment Curb
- ___ Spillways and Downdrains
- ___ Minibenching
- ___ Seeding established as a perennial vegetative cover with a density of 70% of the native background vegetative cover.
- ___ Others Describe: ___

VI. MAINTENANCE AND INSPECTIONS

A. Frequency of Inspections:

- ___ At least once every 7 calendar days, OR
- X Every 14 calendar days and within 24 hours after a rainfall of 0.5 inches (12.7 mm) or more.

NOTE: RAINFALL GAUGE TO BE KEPT ON-SITE TO DETERMINE DEPTH OF RAINFALL

B. Inspection Procedure:

ADOT's Contractor's Inspection Log and Compliance Evaluation Report (CER) will be completed by the contractor or his representative and will be kept on file for 3 years. A signed copy of the CER will be sent to the ADOT resident engineer. If repairs are necessary, they shall be initiated within 24 hours of the inspection report.

PART 2 - To be completed by ADOT & CONTRACTOR

http://www.azdot.gov/inside_adot/OES/Water_Quality/Stormwater/Docs/swppp_construction_template.dot

I. SCHEDULE OF MAJOR ACTIVITIES

A. Project Schedule: ___

Start Date: ___

End Date: ___

B. Construction Sequencing Schedule: (Attach Additional Sheets)
Construction Activities ___

II. INVENTORY OF POLLUTANTS

A. The materials or substances checked below are expected to be onsite during construction:

- ___ Concrete
- ___ Asphalt
- ___ Paints
- ___ Fertilizer
- ___ Herbicides
- ___ Wood
- ___ Fuel
- ___ Oil
- ___ Others, List: ___

III. POLLUTION CONTROL MEASURES

A. Other Best Management Practices:

- ___ Wind Erosion and Dust Control
- ___ Solid Waste Management
- ___ Equipment Maintenance Procedures
- ___ Designated Washout Areas
- ___ Stabilized Construction Entrance
- ___ Protected Chemical and Material Storage Area
- ___ Other, Describe: ___

IV. SPILL PREVENTION AND RESPONSE

A. Spill Prevention:
The procedures outlined in the Best Management Practices listed under Pollution Control Measures will be followed to prevent and contain spills of hazardous material. These preventative action include BMP's on equipment maintenance and proper handling, storage and disposal of chemicals and materials. All manufacturer's recommendations for usage, clean-up and disposal shall be followed.

B. Spill Response:
In the event of any accidental spill of chemicals or hazardous materials, contact the ADOT Traffic Operations Center at 800-379-3701. If a reportable quantity is discharged into the storm water, ADOT shall contact the National Response Center and document the spill to the EPA. ADOT's Hazardous Materials Specialist shall provide instructions.

V. CERTIFICATION OF COMPLIANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS

A. This Storm Water Pollution Prevention Plan (SWPPP) has been prepared in accordance with the latest updated version of ADOT's EROSION AND POLLUTION CONTROL MANUAL FOR HIGHWAY DESIGN AND CONSTRUCTION, published by ADOT Intermodal Transportation Division.

___SWPPP is in compliance with other Federal, State Laws, or Local Regulations.

VI. POLLUTION PREVENTION PLAN CERTIFICATION

A. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attachments and that, based on my inquiry of those persons immediately responsible for obtaining the information contained in the application, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. (Applies to VI. B., C., and D)

B. The operator/contractor as defined in AZPDES should sign the SWPPP in accordance with CGP Part VIII. J, and retain the SWPPP on-site at the construction site or other location easily accessible during normal business hours.

Signature: (operator/contractor) ___
Date: ___
Name: ___
Title: ___
Company: ___

C. ADOT Resident Engineer

Signature: (owner) ___
Date: ___
Name: ___
Title: ___
ADOT District: ___

D. MUNICIPALITY for Municipal Separate Storm Sewer System (MS4)

Signature: ___
Date: ___
Name: ___
Title: ___
MS4 Name: ___

VII. OTHER REQUIREMENTS

A. A copy of the General Permit and NOI are attached in accordance to AZPDES General Permit for Storm Water Discharges From Construction Activities To The Water Of The United States.

B. Projects that are within ¼ mile of impaired or unique waters require the SWPPP to be sent to ADEQ in combination with the NOI. Refer to the Arizona Outstanding, Impaired and Not-Attaining Waters *.PDF Maps by County web link:
http://www.azdot.gov/inside_adot/OES/Water_Quality/Stormwater/outstanding_unique_waters_maps_by_county.asp

C. For further requirements, check the ADEQ's Smart NOI Web Page: *https://az.gov/app/smartnoi/*

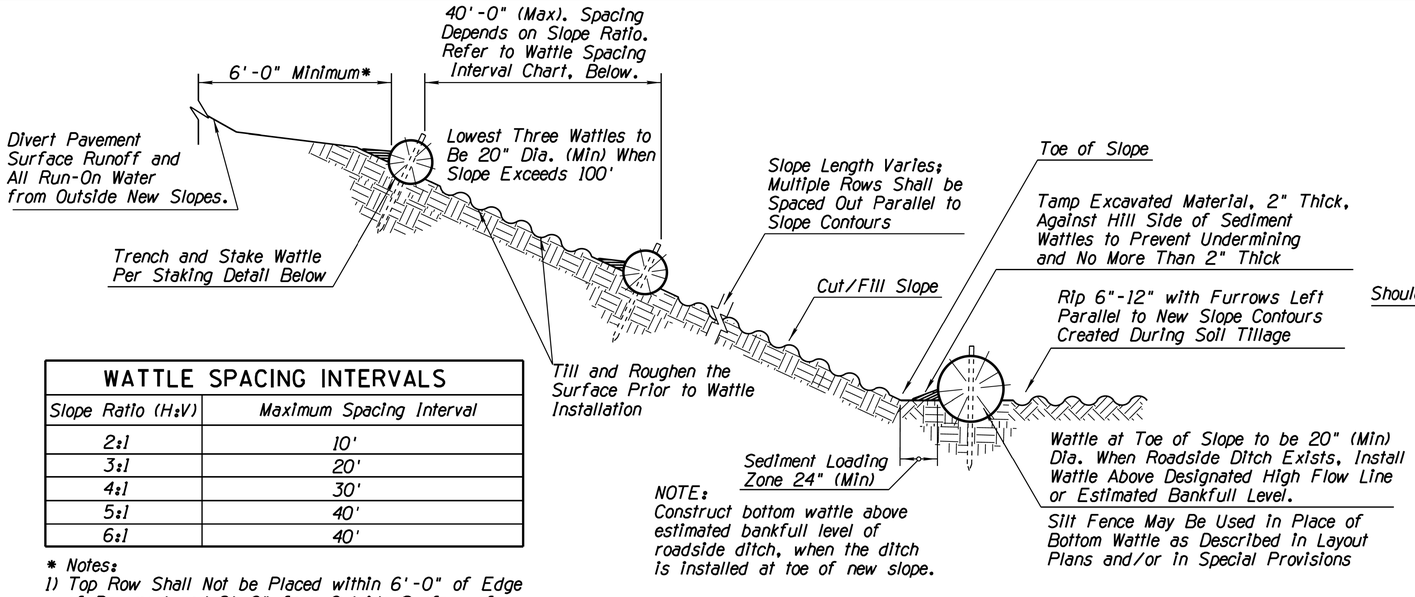
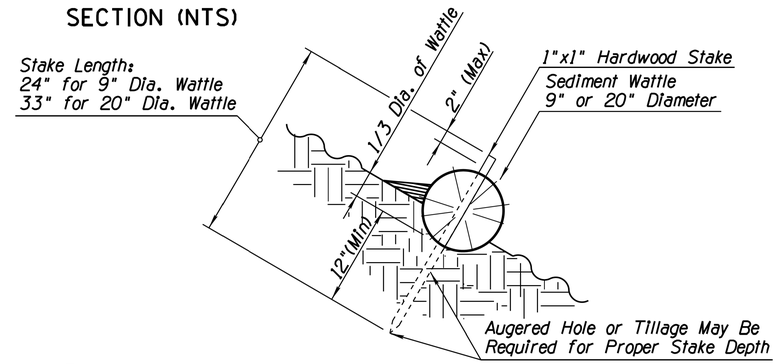
MILEPOST 149	F.H.W.A. Arizona Division					
STRUCTURE NO. 08216	LOCATION CROOKTON RD, YAVAPAI COUNTY					DWG NO. E-1.01
	TRACS NO. T0592 01 C					___ OF ___



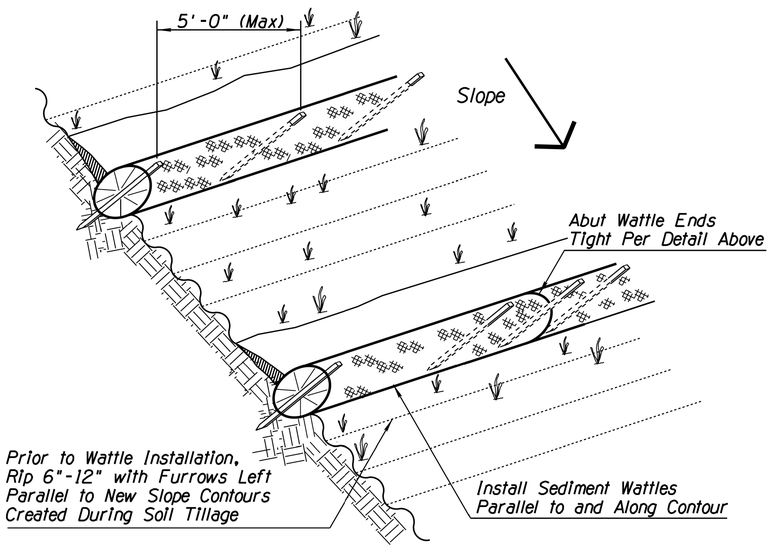
SECTION (NTS)

WATTLE SPACING INTERVALS	
Slope Ratio (H:V)	Maximum Spacing Interval
2:1	10'
3:1	20'
4:1	30'
5:1	40'
6:1	40'

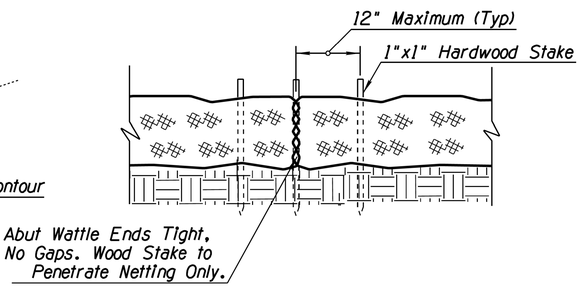
* Notes:
1) Top Row Shall Not be Placed within 6'-0" of Edge of Pavement and 9'-0" from Outside Surface of Barrier.
2) For erosive soils, place rows of wattles closer together.
3) For soils with low erosive potential, place rows of wattles further apart.



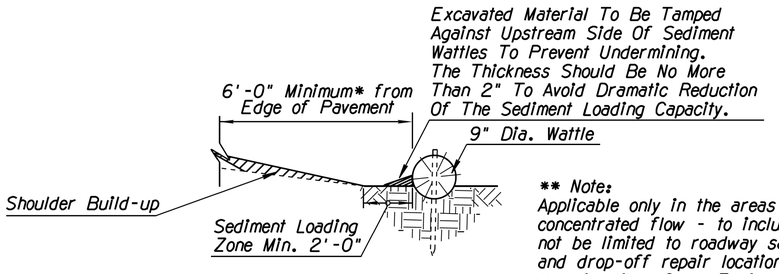
SEDIMENT WATTLE STAKING DETAIL (NTS)



SEDIMENT WATTLE LAYOUT (NTS)



SEDIMENT WATTLE OVERLAP (NTS)



NEW SHOULDER BUILDUP ** PROTECTION SECTION (NTS)

NOTES:

1. Install Sediment Wattles as slopes are constructed to grade or as directed by the Engineer. Select, install and maintain in conformance with manufacturers' specifications to meet site conditions for slope protection and in accordance with good engineering practices. No Sediment Wattles shall be installed in urban freeway medians, nor where cable barrier systems are employed.
2. Sediment Wattles shall be in continuous contact with trench bottom and sides. Do not overlap wattle ends on top of each other. A 20" Dia. wattle may be made from 2-3 rolled excelsior or straw blankets.
3. Butt adjoining wattles tightly against each other. Drive the first end stake of the second wattle at an angle toward the first wattle to help abut them tightly.
4. Repair any rills or gullies promptly. Make field adjustments and corrections of Wattle CM/BMP immediately if it is causing flooding, erosion, and/or affecting roadway safety.
5. Construction of cut slopes 2:1 and steeper in soil and rock materials that can be ripped shall be constructed, whenever possible, by Minibenching. Refer to Slope Minibenching CM/BMP Detail.
6. Loosening surface soil is not required where Minibenches are used. For seeded areas, tillage shall be performed to form minor ridges and furrows parallel to new slope contours and as specified in Section 805 of the Specifications and project special provisions.
7. Divert and direct run-on water from outside of the slopes to the spillways and/or rock riprap/rock mulch. Diversion dikes and/or ditches are necessary on natural undisturbed slopes beyond the top limits of new slopes to divert run-on water.
8. Installation and maintenance of Sediment Wattle CMs/BMPs shall not negatively impact traffic safety, nor the designed function of roadway or bridge drainage facilities.
9. Install and maintain Sediment Wattle CMs/BMPs to carry the stormwater of at least 2-year, 24-hour events.
10. The Sediment Wattle CM/BMP's pay/bid item shall include all materials used for this CM/BMP: all ground preparation, furnishing, installing, maintenance, final removal, and disposal of this temporary CM/BMP, as well as returning the area to an acceptable condition as approved by the Engineer.
11. Refer to Specification Section 810-2.06(C) for Sediment Wattle material specifications.
12. Make field adjustments and corrections to ensure NO sensitive biological resources (native species / habitats) will be adversely impacted.
